Following adoption of the foregoing resolution, the Chairman read the following policy statement:

"On September 29 it was announced, for the information of the industry interested in bidding on future tideland oil and gas leases, that the Commission had concluded that the interests of the State would be served best by inviting cash-bonus bids for leases to be considered in Santa Barbara County westerly of the Elwood Oil field.

"Again, for the information of potential lease bidders, it appears desirable to emphasize that there are potential advantages which should result from the Commission's initiative in the establishment of the leasing program authorized today. Particularly, it should be apparent that one of the foremost advantages should be the feasibility of effective long-range planning, both by industry and by the State, in exploration and development under a continuing and augmented leasing program.

"It is the expectation of the Commission that it will seek the orderly development of the tidelands by taking the initiative in the opening of new parcels in the future for leasing, without necessarily waiting for industry nominations. This program would be intended to supplement and complement, not to replace, active industry area nominations or other effective suggestions for the best possible offshore development in the interest of the people of California."
